EFFICIENTLY MANAGE ENERGY AUDITS, COMMISSIONING, AND RETRO-COMMISSIONING OF GROCERY STORES

Get the only collaborative software that runs in the cloud, created specifically for supermarket chains and their service providers

Run it on any desktop, laptop, tablet, or smartphone that has access to the Web.

Track the real-time progress of multiple projects and service providers:

• Collect and maintain project data and details, all in a single online application.

• See detailed project status across multiple contractors and building sites.

• End the frustration and inconvenience of using emails to update project details.

• Stop wrangling inconsistent, inconvenient spreadsheets.

• Don't waste another minute updating and managing spreadsheet versions.

**If you work for a service provider or solution vendor…**

• Reduce technician labor hours by 20% to 30% per project.

• Deliver consistently high-quality results for clients, with no details falling through the cracks.

• Quickly build a credible, persuasive business case for energy-saving projects.

• Efficiently and accurately calculate potential savings for energy-conservation initiatives.

If you manage projects for a grocery retailer…

• Stop creating Excel Spreadsheets that are cumbersome to use, share, and retrieve.

• Achieve higher project quality through consistent processes and reporting across contractors.

• Communicate detailed specifications to field technicians.

• Get feedback from your contractors to see how they've resolved issues that were uncovered.

• Know when a contractor has completed their job, so they can be paid.Keep projects on track with automatic calculation of percentage completion.

• Save 10 to 12 hours of administrative time per project.

For supermarket project managers, 360 - Services offers these features and capabilities:

- **Master list of project activities and tasks.** Assign appropriate responsibilities to each contractor.
- **Detailed activity tracking.** Manage activities by site, contractor, and technician.
- **Open issues and deficiencies list.** Focus attention on what remains to be done.
- **Specifications and corporate guidelines.** Tell field technicians how to set up and calibrate various kinds of equipment.
- **List of energy-saving opportunities.** Use data from building management systems (BMS) to see where to save money.
- **Customizable reporting and analytics.** Use our suggested formats or create your own.
- **Artificial-intelligence engine for automatic data analysis.** Enable technicians to flag deficiencies in refrigeration & HVAC systems.

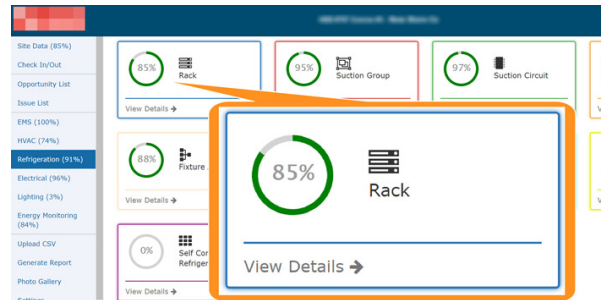

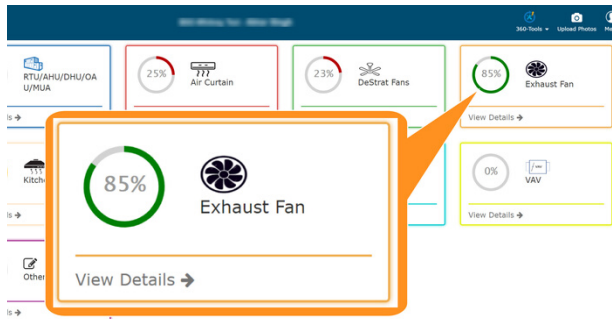

Manage projects from any desktop or mobile device that provides access to the Web.

For field technicians and energy consultants, 360 - Services offers these features and capabilities:

- **Paperless note taking and sharing.** Toss out your pencil and pad. Use your Smartphone.
- **Easy access to online tools**. Make your onsite work more efficient with pressure/temperature tables for carbon dioxide and hydrocarbon refrigerants; moist air calculations; sunrise/sunset data
- **Data fields for your notes.** Update completed tasks and share notes, comments, and recommendations
- **Photo sharing.** Take a picture of the situation or the work you did. Share it easily. Photos often communicate better than words.
- **Cost/benefit calculations.** Use a powerful computer model to calculate annual savings for each location. Normalize for such factors as local weather, store square footage, local assets, and more. Consider effects of rebates from local utilities.
- **Asset database.** Look up and track details of local equipment.
- **Photo and document management.** Attach relevant details to project tasks.

For refrigeration and HVAC projects, you see percentage completion by equipment type. You also have fast, convenient access to detailed forms and checklists, with room for optional notes and photos for each asset.

You see a deficiency list that enables real-time collaboration between project manager and contractor. You can also see a contractor's photos of each deficiency and, on project completion, its remedy.

Singh360 is a software & services company that drives energy savings for owners of buildings on multiple sites.
